Sounds good. I have a meeting with Hennepin County this afternoon so I will bring this up with them. They are also proposing to do approx. 15 inspections.

It is a warm 68 degree here at home. Thankfully it is my normal work at home day. Yesterday it was a little chilly walking to work.

One other thing I forgot to mention in my last email about inspections is that I probably will be making 1 or 2 trips to Minnesota and could probably do some inspections as well. I am not sure when exactly I'll be in Minnesota, but I'll keep you informed.

I talked to Doug yesterday. He indicated that the sample results of the water in the UST should be back today. If everything goes as plans he will transfer the contents of the UST to the local water facility on Friday. He then plans to start removing the USTs on Tuesday or Thursday of next week. This is only tentative based on the sample results as well as how fast he can get the USTs pumped out.

Doug is supposed to give me an update when he knows for sure he will be there. I will be sure to let you know.

Mark and Ryan-

Do either of you have a status update on this site? We did not hear anymore after Doug said he was going to collect water samples so we weren't sure if the tank removal happened as planned or if it was postponed. The MCPA did not receive any paperwork stating the date changed. Thanks for any help.

I called the owner and he plans to go ahead with the removal. He indicated that he is going to have Doug sample the water to see if the city of Onamia will take the water. If he can get the water tested this afternoon and the city will take the water he plans to go ahead with the removal tomorrow. I am not sure what the owner's next step would be if the water comes back contaminated. It sounds like he may need to get some more money, but I am not exactly sure.

I mentioned that we plan to inspect the facility in the spring and if the USTs are still in the ground at that time then we most likely will issue an order to remove the USTs.
